The Blue NIMS course takes the fundamental principles taught by the FEMA National Incident Management System (NIMS), as well as the Incident Command System (ICS), and breaks the information down into an everyday practical application environment that is directed at “boots-on-the-ground” law enforcement. In this course, officers learn by taking ICS fundamentals and linking them with current and best practices in law enforcement and unified response operations.

This course provides models to apply ICS principles on numerous scenarios that vary from a single vehicle accident to an active attacker incident.
